OIL LEVEL INDICATORS
IFG Series
The inclined face gauge for oil-immersed power transformers

www.cedaspe.com
1.0 Features
The magnetic oil level indicators type IFG has been specially studied for use on power transformer to
give an analogical indication of the oil level inside the conservator by a graduated dial with arrow plus
one or more electric signal (max 4 signals) when the oil inside the conservator reaches the max or min
level.

2.0 Construction features
- **Materials and components**
  - The body of the gauge is made in one piece of solid compact aluminium alloy casting oiltightned proof.
  - The dial face is inclined of 20° from the connecting flange towards the ground, offering a better view at
    human height of the oil level indication system.
  - The indicating system is located inside the body and is composed by a yellow arrow, a graduated scale
    with ten division, one or more contacts activated by cams and a permanent magnet.
  - The monitoring system is partially located inside the fixing flange and is composed by a permanent
    magnet, a bevel gear rigidly connected to a float arm which follows the movement of the surface of the
    oil.
  - The two systems are connected by a magnetic joint obtained using the magnetic flux of the permanent
    magnets.
  - The electric signal coming from contacts are carried out through a waterproof terminal box (IP55) fitted
    with a PG16 cable gland and a ground screw.
- **Oil-tightness and resistance to pressure**
  - The magnetic oil level indicators IFG are suitable to work with oil up to a max temperature of 115°C;
    lowest ambient temperature –25°C and are mechanically resistant to vacuum (10 torr).
- **Resistance to dynamical stress**
  - The magnetic oil level indicators IFG can operate without undue operation in following conditions:
    Sinus vibrations with frequency \(\leq 120\) Hz and amplitude \(\leq 250\) µm;
    Dynamical conditions causing following accelerations:
    - Max 3g in all directions, sinus vibration, amplitude \(\leq 20\) mm;
    - Shock condition with max 10 g in all directions.
- **Surface protection**
  - Body, frame, terminal box and cover are painted internally and externally with one primer coat of epoxy
    paint and externally with a finishing coat of polyurethane paint colour RAL 7030. The primer coat on the
    internal surfaces is compatible with transformer mineral oil up to temperatures of 120°C. Total thickness
    of two coats is 80 microns; special painting cycle can be provided for transformers located in very
    polluted areas.

3.0 Manufacturing program
- Magnetic oil level indicator series IFG is manufactured in 2 different execution
  - Type IFG FK2 axial type suitable for use in conservator with rubber bag
  - Type IFG BQ2 radial type suitable for use on OLTC compartment
- All execution are equipped with 1,2 or more electric contacts , microswitch type that are activated when
  the oil (and consequently the arrow of the instrument) reaches presetted positions.
  - Indicating arrow moves over a 180° angle, float arm moves over an angle of 60°/140° respectively for
    type FK2, BQ2; for type BQ2 is also available a special execution with float arm rotation angle of 90°.
  - White indicating dial having 10 divisions with black marking.

4.0 Operation, installation and maintenance
- **Operation**
  - Should an increase of oil inside the conservator (due to heating) or a decrease of oil (due to an oil loss)
    the float arm detects this variation and gives an optical signal (analogic type) through the arrow and
    when the oil reaches the presetted positions for alarm and/or trip a microswitch is activated and an electric
    signal is provided inside the terminal box.
- **Installation**
  - Use one magnetic oil level indicator for the conservator of the main tank and one for OLTC conservator
    (if present); the oil level indicator can be fixed to the conservator using 8 (or 6) nuts M10 complete with
    washer and spring washer that have to be mounted on studs M10x30mm
- **Maintenance**
  - Magnetic oil level gauges IFG don’t need specific maintenance; we suggest to check regularly contacts
    during the normal maintenance of the transformer.
5.0 Electric contacts
The contacts are microswitches changeover type and are mechanically operated by a cam.
Following main characteristic of microswitches

- Lever: Stainless steel
- Body and pushbutton: Thermosetting composition
- Contact material: Silver
- Mechanical endurance of contact: 1x10^7 cycles
- Temperature range: -40°C - +125°C
- Standard interruption power AC: AC 250V-5A
- Standard interruption power DC: see diagram at end of brochure
- Insulation to earth at 20°C: 2.000V
- Protection degree of terminal box: IP 55

6.0 Wiring diagrams
Available wiring diagram are:
- wiring diagram type C1: gives a signal when oil reaches low level inside conservator
- wiring diagram type C2: gives a signal when oil reaches low and max level inside conservator
- wiring diagram type D1: gives an alarm signal when oil reaches low level and trip signal for very low level inside conservator
- wiring diagram type D2: gives a double signal when oil reaches low level inside conservator
All contacts are operated 3/5 degrees before the arrow reach the minimum or the maximum level of oil
See sketch

7.0 Compatibility of installation
The installation compatibility of the magnetic oil level indicator depend mainly on the material used for the flange gasket; therefore the executions differ because of the material used for this gasket.

- Standard execution N – nitrile rubber gasket

Admitted operating conditions are:

Environmental conditions:
- Ambient temperature: -25°C to +50°C
- Relative humidity: 95% to 20°C - 80% to 40°C - 50% to 50°C
- Insulating liquid: transformer mineral or silicon oil
- Temperature: -25°C to +115°C

- Execution C – cork gasket

Admitted operating conditions are:

Environmental conditions:
- Ambient temperature: -20°C to +50°C
- Relative humidity: 95% to 20°C - 80% to 40°C - 50% to 50°C
- Insulating liquid: transformer mineral or silicon oil
- Temperature: -20°C to +110°C

- Special executions

For other environmental and/or operating conditions to be examined individually.

8.0 Ordering Instructions
When ordering must be defined following data:
- Type of magnetic oil level indicator: IFG FK2 or BQ2
- Type of gasket required: N; C or special
- Wiring diagram: C1; C2; D1; D2
- For type FK2 also float arm length or a mounting sketch showing min, max and filling levels of oil, (see form at the end of brochure)
RESISTIVE LOAD

INDUCTIVE LOAD $\cos \phi = 0.3 \ L/R = 10\text{ms}$

CONTACT BREAKING CAPACITY DC
